Project Name	Project – Smart solution for railways

The image displays the Node-RED web interface. The top section shows a flow editor with a single flow named 'Flow 1'. The flow starts with an 'IBM IoT' node (connected), which branches into two parallel paths. The first path goes through a 'temperature Node' function node to a 'Temperature' output node. The second path goes through a 'humidity' function node to a 'Humidity' output node. A third path starts from a '[get]/sensor' node, goes through an 'httpfunctionnode' function node, and ends at an 'http' output node. The left sidebar shows the 'common' and 'function' node palettes. The bottom section shows a 'control' dashboard titled 'weather monitoring'. It features two gauge charts: 'Humidity' with a value of 14 and 'Temperature' with a value of 84. Below the gauges are two buttons labeled 'LIGHT ON' and 'LIGHT OFF'.
